

Answer/Graph – Part 1

The graph presented is the representation of the figure 8.3 in the book Reinforcement Learning.

The episodes were averaged over 10 independent runs and the quantity of steps in the first episode was established in 1300 for all the types of planning ($n = 0, 5, 50$).

All the steps per episode averaged over 10 runs can be found on each .txt specific for each planning:

-NumStepsN0

-NumStepsN5

-NumStepsN50

The result is presented below:
